Claim 16 is rejected 135 USC 102 as being anticipated by Hori. Hori teaches in figures 9A and 9B a surface acoustic wave apparatus comprising a piezoelectric substrate #2 at least one electrode for a surface acoustic wave element disposed on the piezoelectric substrate #3c, 3d and an electrode pad disposed on the piezoelectric substrate and arranged to be joined with a pump during a bump bonding process #8 a wiring electrode for electrically connecting the electrode pad in the electrode for the surface acoustic wave element (this would be the portion of #7 shown in figure 9B that extends toward the right side of the page toward #3a) and the electrode pad includes a first electrode layer disposed on the piezoelectric substrate #5 and a second electrode layer lemonade on the first electrode layer #7 the second electrode layer in the wiring electrode are integral with each other and includes a common conductive film, the electrode for the surface acoustic wave element in the first electrode layer of the electrode panned are arranged in contact with each other (best shown in 9A) and upper surface of the electrode for the surface was to clear device is disposed at height that is different than a height at which an upper surface of the first electrode layer is disposed (note the upper surface of #3c, 3d is lower than the top surface of #7). Note that Hori teaches the elimination of layer #6 (see column 7 lines 54-59)

Regarding applicants remarks the examiner agrees that with the amendments made to claim 16, that claim 16 now clearly defines the teaching of Takata and Europe (905).

Claims 1-15 and 18-22 remain allowable.
